KEYWORDS Mitochondrial DNA diversity; macrohaplogroup N; haplogroup R; sub-haplogroup U; Indian populations

ABSTRACT Indian populations show mitochondrial DNA macrohaplogroups M and N. Among the various haplogroups of N, haplogroup R and its sub-haplogroup U are predominant among the diverse populations. An overview of about 130 studied populations reveals wide diversity of haplogroup R and its sub-haplogroup U among varied ethnic status and different linguistic families. The various lineages of macrohaplogroup N observed in India shows least affiliation with respect to language, geography or ethnicity. However, between the regions, there is a wide variation of subhaplogroups of R and U; western region among the castes and southern region among the tribes show higher haplogroup diversity than the other regions.
