KEYWORDS Profitability. Gross Margin. Groundnut Production

ABSTRACT The study examined the profitability of groundnut production in Michika Local Government Area of Adamawa State. Gross Margin analysis was strictly used. From the costs and return analysis, it is found that the total cost of production by farm size per hectare in the area is N133, 812.68; the gross margin per hectare is N221348.68 while the average net return per hectare is N40, 097.63. The findings also shows that, farmers in the area earned an average net revenue ranging between N17, 217.00 and N445, 011.35 depending on farm size which indicated that groundnut production is a profitable venture in the study area. Farmers should maintain output per hectare at a high level with the family labor at their disposal through good management and efficient use of modern inputs. Farmers with no family members should join communal labor arrangements where they will benefit from it for their farm operations.
