**KEYWORDS** HBsAg. Carriers Polymorphism. Genetic Markers

**ABSTRACT** A total of 250 HBsAg carriers and 250 controls was screened for ABO, Rh (D) MN blood groups. There was preponderance of B blood group (38.4%) and Rh (D) positives (96.8%) in carriers compared with controls. In the MN system the M (48.4%) and MN (19.2%) blood group were found significantly higher among HBsAg carriers.
