KEYWORDS Hypertrichosis. Y – Linked. Oraons. Purnea

ABSTRACT Hypertrichosis among Oraons of Purnea was studied. Hypertrichosis of ears among Oraons have a frequency of 15.55 percent (hairy Helix 5.18%, tragus hair 7.40% and ear lobe 2.96%) which is similar to Indian populations. The frequency of hypertrichosis in North and Central India is comparatively lower than in South India.
