

Plantar Inrterdigital Ridge Among The Gond of Madhya Pradesh

Dipak Kumar Adak

Anthropological Survey of India, Shillong 793001, Meghalaya, India

KEYWORDS The Gond. Plantar Ridge Counts. Cluster Formation

ABSTRACT The present study deals with the plantar interdigital ridge counts of the Gond of Sagar, Madhya Pradesh. The study reveals that there is no significant bilateral or bisexual difference. In both sexes the Gond and Tibetan independently form two clusters, whereas the Brahman and Bhangi combinedly form another cluster.
