KEYWORDS Apple Pies. Ascorbic Acid. Crude Protein Content

ABSTRACT Himachal Pradesh is first being labeled as the 'apple state' of India. Due to poor marketing and hazardous transportation system, a major chunk of the apple crop gets destroyed ever year. The researchers intend to popularize more purposeful use of this surplus stock for making apple products. One such product is apple pie, a delicious apple product, new to this part of the country which does not require expensive packaging material and could be wrapped in aluminum foils or paper and marketed to distant markets. Carefully planned strategy has popularized this new introduction in a section of society. More data shall be presented on the chemical analysis, nutritional aspects and shelf-life studies.
