KEYWORDS Nutritional Status. Body Mass Index. Sugali. Tribal Population

ABSTRACT Present study has been conducted to know the nutritional status of 1422 Sugali adults (705 males and 717 females) aged 21 to 60 years belonging to 10 Sugali Thandas located in four mandals of Cuddaph district, Andhra Pradesh. The degree of malnutrition is assessed by using Body Mass Index (weight/height²). The study reveals that both Sugali males and females present high parent age in 'Normal' grade and less percentage in 'Severe' degree of malnutrition. 'Grade I obesity' is negligible in both males (0.57%) and females (0.98%).
