

Women's Health after Delivery in Brajrajnagar Mining Area of Orissa

Kanchan Padhi and R.K. Choudhury

KEY WORDS Health. Women. Delivery. Brajrajnagar.

ABSTRACT The present study was undertaken to find out the women's health after delivery in Brajrajnagar mining area of Jharsuguda district, Orissa. A total of 131 samples have been collected among lactating mothers from Mahanadi Coal Fields. The lactating mothers are socio-economically dependent on Mahanadi Coal Fields Ltd. (MCL). It provides all sorts of medical facilities to its employees. In spite of this the lactating mothers after delivery are affected by different types of post partum health problems like post partum haemorrhage (87.79%), prolonged discharge (20.31%), low back pain (66.41%), Recycling starts within 4 months (67.99%) after the birth of the child but the majority of lactating mothers (87.99%) it occurs within 6 months after delivery.
