**ABSTRACT** Creativity is important because it enhances the quality of solutions to life's problem. The present study is an exploratory attempt to assess the vocational interest of high and low creative adolescent. A representative sample of 120 boys (60 high scorer on creativity and 60 low scorer on creativity) and 120 girls (60 high scorer on creativity and 60 low scorer on creativity) in the age range of 14-18 years, belonging to middle income family were randomly selected. Two major tools were used for data collection i.e. Verbal test of creativity and Comprehensive interest schedule. Both high creative boys and girls had more focused vocational interest as compared to their low counterparts. They were more expressive and self actualized. Creativity was significantly related to vocational interest of boys and girls.
